Mr. Paul Livesay
Controller
Oregon Portland Cement Company
111 S.E. Madison Street
Portland, Oregon 97214

Dear Paul:

Attached are three schedules (A-B-C) I have prepared, which indicate the status of all materials physically counted on Saturday, as well as those counted Monday, March 26, 1984. As we discussed on the telephone, there were various items that did not get counted during the Saturday program and I called Ken Rone, yesterday, and requested that he have someone take a physical at that time. The specific items were:

1. Slurry
2. Molasses
3. Paper Bags (Without L.S.I. Name)
4. Lignosite

In addition to the above four items, we needed clarification on the Propane. The measurement on Saturday resulted in the contents being 60% of tank capacity, yet we did not have the tank capacity available. Also, the shrink wrap had been counted; yet the conversion factor to (each) as carried on our books was not available. The status of all items is as follows:

1. Slurry: Physical inventory was taken by plant personnel. Physical reported as 1,700 tons.
2. Molasses: Physical inventory was taken by plant personnel. Physical reported as 1,789.5 gallons or 8.5 tons.
3. Paper Bags: Bag inventory was reviewed to determine the number of usable bags without the Lone Star name. The results of the review by plant personnel were that all bags had Lone Star imprinted on them.

LONE STAR INDUSTRIES, INC.

March 27, 1984

-2-

4. Lignosite: Physical inventory was taken by plant personnel. Physical reported as 3,100.0 gallons or 15.5 tons.
5. Propane: Plant personnel were asked to provide the tank capacity which was reported to us as 499 gallons. Based on the inventory Saturday, the tank was 60% full which equates to 299 gallons.
6. Shrink Wrap: Plant personnel provided the breakdown of actual shrink wrap on the basis of (each). The total reported to us was 13,060 (see Exhibit I attached).

I have entered the quantities obtained in this subsequent physical on the attached Schedule A under the heading of 1st Physical. I would appreciate your review of same and if you agree with the physical, so indicate in Column 3 (Schedule A) by entering your initials and returning a copy to me.

As I mentioned to you yesterday, I have found an error on the physical inventory sheet for cement. The measurement calculations by silo group, etc., are correct; the only problem was that the sub-totals by group do not add down to the bottom line total. The total cement should be 31,493.90 tons versus the 32,496.45 tons shown. (See Exhibit II attached).

Group I:	9,032.03 Tons
Group II:	21,591.85 Tons
Scale Tanks	<u>870.02 Tons</u>
	<u>31,493.90 Tons</u>

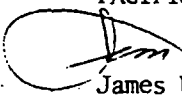

After you have reviewed the attached, please advise if you are in agreement or if any major discrepancies exist.

Thank you, and please convey to all of the Oregon Portland personnel our appreciation for the fine effort and cooperative attitude during Saturday's endeavor.

If you have any questions, please let me know.

Yours truly,

LONE STAR INDUSTRIES, INC.
